JERUZ LAYNELL GARDE

Computer Engineer | Full-Stack Developer | Network & Systems

Southern Leyte, Philippines • +63 961 417 0201 • jeruzgarde@gmail.com

PROFESSIONAL SUMMARY

Computer Engineering graduate and IT educator working across software and infrastructure. Builds full-stack web and desktop applications in React, Django, and C#/.NET, and designs, configures, and troubleshoots networks — from IP addressing and switch/router configuration to structured cabling and network security. Teaches computer networking and information assurance at college level.

TECHNICAL SKILLS

Languages & Web Java, Python, C#, JavaScript, SQL, HTML/CSS; React, Django, REST API design and integration

Databases & Desktop MySQL, Microsoft SQL Server, relational design and normalization; C# WinForms, Raspberry Pi and IoT automation

Networking LAN/WAN design and configuration, TCP/IP and OSI models, IPv4 subnetting, VLANs, routing and switching, DHCP/DNS, wireless setup, structured cabling (T568A/B) and termination, network troubleshooting

Network Security Firewall and access control configuration, network hardening, packet inspection, authentication and access management, information assurance fundamentals

Tools & Practices Cisco Packet Tracer, Wireshark, command-line network utilities, Git and GitHub, software testing and debugging, technical documentation

PROFESSIONAL EXPERIENCE

College of Maasin — Southern Leyte, Philippines 2025 – 2027

IT College Instructor

- Teach lecture and laboratory courses in Computer Programming 1 & 2, Object-Oriented Programming (Java), Computer Networking, Hardware Systems and Servicing, and Information Assurance & Security.
- Design and maintain course materials, programming assignments, practical examinations, and lab activities covering software development, networking, and computer hardware.
- Mentor students through debugging, system troubleshooting, and capstone project development, guiding them from requirements gathering to working deployed systems.
- Run the computer networking laboratory: cable fabrication and testing, IP addressing and subnetting, switch and router configuration, and simulation in Cisco Packet Tracer.
- Maintain and troubleshoot lab workstations and network equipment, diagnosing connectivity, hardware, and configuration faults.

SELECTED PROJECTS

Network Design & Structured Cabling Laboratory Projects Cisco Packet Tracer · TCP/IP

- Designed and built small-office LAN topologies end to end: subnetting plans, switch and router configuration, cable fabrication and certification, and connectivity testing.

Pickleball Court Booking System React · Django · MySQL

- Full-stack reservation platform for court availability, scheduling, and bookings; Django REST backend with a React front end.

Pension House Point-of-Sale System C# · SQL Server · WinForms

- Desktop POS for guest transactions and billing on a normalized SQL Server database, with transaction logging and reporting.

Dental Clinic Management System C# · SQL Server

- Patient records, treatment history, and appointment scheduling with role-based access for clinic staff.

AI Automation & Chatbot Integration OpenAI API · Python

- Integrated LLM APIs into application workflows to automate routine responses and data handling.

Raspberry Pi Smart Automation Projects Raspberry Pi · Python · GPIO

- Sensor-driven automation prototypes linking hardware, control logic, and networked remote monitoring.

EDUCATION

Southern Leyte State University Southern Leyte, Philippines

Bachelor of Science in Computer Engineering
